开关 Switch

```
<span class="switch" data-toggle-switch></span>
```

激活与禁用

添加 `class="active"` 转换为激活项，添加 `class="disabled"` 转换为禁用项

```
<span class="switch active" data-toggle-switch></span>
<span class="switch disabled" data-toggle-switch></span>
```

配色

```
<span class="switch active bg-gray" data-toggle-switch></span>
<span class="switch active bg-orange" data-toggle-switch></span>
<span class="switch active bg-lime" data-toggle-switch></span>
<span class="switch active bg-blue" data-toggle-switch></span>
<span class="switch active bg-pink" data-toggle-switch></span>
<span class="switch active bg-purple" data-toggle-switch></span>
```

事件

使用 `HTMLElement.setActive()` 事件，传入参数以打开或关闭元素，参数类型为 `Boolean`

```
const switch = document.querySelector('#element1');
switch.setActive(true); //true || false
```
